Learn Something New with LinkedIn

LinkedIn is helping people discover and develop the skills they need through a personalized, data-driven learning experience.

Browse different Marketing jobs, descriptions, and even salary info

Have you spent hours, days, or even weeks scrolling through hundreds of job listings trying to identify the "perfect job title" that fits your interests? You're not alone. One of the biggest challenges job seekers have is knowing what types of jobs to search for in their job search, or even which jobs exist (e.g: Sales Jobs).

Software Developer Jobs   Explore top cities, companies, and open jobs.

Jobs / Engineering / Software Developer

271,778
Jobs

Software developers collaborate with product managers and other developers throughout the software development lifecycle to design and create effective software programs. After reviewing needs requirements, a software developer will write code and integrate third-party programs as required. Software developers then focus on testing, debugging, reviewing feedback and deploying their programs. In some software developer roles, you'll work with a technical writer or independently to create training manuals for any software you create. Software developer jobs can be found in technology-based companies, as well as internally as private businesses with large IT departments. You'll typically work a standard workweek as a software developer, however, as software development is a deadline-driven industry, additional hours may be required when a project is nearing completion. To become a software development engineer, you'll need a bachelor's degree or higher in computer science, with a focus on building software. Some software developers specialize in specific languages such as C++, Java, or JavaScript, however, the more versatile your coding experience, the more success you may have.

Top cities for software developer jobs

New York, New York (3959)	San Francisco, California (3727)
Seattle, Washington (3259)	Chicago, Illinois (1978)
Atlanta, Georgia (1434)	Austin, Texas (1394)

Apple (116)	Microsoft (116)

Industry information updated by LinkedIn

LinkedIn heard you and as a result launched new career pages designed with the applicant in mind. Now, job seekers and students unfamiliar with the professional landscape can browse job titles within various job functions. LinkedIn surfaces popular titles and listings, as well as top cities and companies for a specific job (e.g., Human Resources jobs), making it easier for job seekers and exploring students to learn more about opportunities in various fields.

Now that you've found the right path, start diving in by learning new skills.

Discover and Develop New Skills Via LinkedIn Learning Video

Each week presents a new opportunity for you to learn the skills necessary to take on the next big challenge.

LinkedIn Learning wants to do everything possible to help make that happen.

That's why each week more classes are added to the 10,000+ course library. LinkedIn's goal is to help people discover and develop the skills they need through a personalized, data-driven learning experience.
